Hey Rob, AVR-GCC is a set of tools used to compile source code (C and C++ code) into a format that can be loaded onto an AVR microcontroller, usually a .hex file. AVR-GCC isn't specially made for the N|Watch, it can be used by any project that needs to compile some code for AVR.

microprocessors hosted on the Windows platform. It includes the GNU GCC compiler for C and C++.

### **WinAVR / News - SourceForge**

This page attempts to describe a procedure for installing a complete GCC-based toolchain on a modern Windows system. I've developed these instructions on my Windows 10 machine, but they should work for versions of Windows as far back as Windows 7. On older versions, you might want to use WinAVR.

### **Using the GNU AVR toolchain on Windows 10**

AVR-gcc compiler including avr-libc, AVR-Ada, and the avr-binutils. If you run MS-Windows I strongly recommend to get the latest WinAVR distribution. It has all the necessary tools nicely packaged. Some Linux distros also provide AVR development tools (Ubuntu, Suse). They probably do not contain the latest bug fixes and patches.

Update WinAVR to the latest AVR-GCC / AVRDUDE. May 27th, 2014 by Alex. Just a quick post that I'd would be good to mention - If you're like me and still using WinAVR 20100110, you'll know it hasn't been updated for a long time, but what if you want support for the new MCUs like the ATtiny1634? It's quite simple, just follow the ...

WINAVR is the C-language compiler. What you describe sounds like you were successful in installing AVRSTUDIO4 and WINAVR. If you want to write your AVR code in C then all need to do launch AVRSTUDIO4 and select AVR-GCC. After answering a few startup question you should find yourself in the C-language editor.
