Geometry Surface Area And Volume

Area And Volume

Volume and surface area help us measure the size of 3D objects. We'll start with the volume and surface area of rectangular prisms. From there, we'll tackle trickier objects, such as cones and spheres.

given object is the area covered or region occupied by the surface of the object.

Whereas volume is the amount of space available in an object.

We have learned so far in geometry about different shapes and sizes such as sphere, cube, cuboid, cone, cylinder, etc. Each shape has its surface area as well as volume.

Volume - Definition and Formulas

A cone is a pyramid with a circular base that has sloping sides which meet at a central point. In order to calculate its surface area or volume, you must know the radius of the base and the length of the side. If you do not know it, you can find the side length (s) using the radius (r) and the cone's height (h). $s = \sqrt{r^2 + h^2}$
