The rays from sun i.e., from infinity, are parallel to principal axis after reflection converge at a point, known as focus. Therefore, focal length (F) of concave mirror is 15 cm. And we know that, same size, real and inverted image is formed by concave mirror when object is placed at focus $2F$ or centre of curvature so to form same size image object will be placed at $15 \times 2 = 30\text{cm}$.
