Approach 5th
Edition

Triangles begins the study of Trigonometry. It begins with the geometric definitions of the three main trig functions. Some instructors prefer to begin with the unit circle approach and then proceed to the right triangle approach. We chose to put this lesson before Unit Circle – Part I and Part II, though it could be done afterward.

Trigonometry A Right Triangle Approach

A right triangle is a
triangle in which one
angle is a right angle.

File Type PDF

Trigonometry A

Right Triangle

The relation between the sides and angles of a right triangle is the basis for trigonometry.

The side opposite the right angle is called the hypotenuse (side c in the figure). The sides adjacent to the right angle are called legs (sides a and b).

In a right triangle, the

File Type PDF

Trigonometry A

Right Triangle

Approach 5th Edition

side opposite the right angle is called the hypotenuse, and the other two sides are called its legs. For example, in Figure 1.1.4 the right angle is C , the hypotenuse is the line segment AB , which has length c , and BC and AC are the legs, with lengths a and b , respectively.
